The present invention relates to methods for identifying genes and proteins that are implicated in a specific disease or physiological condition. The method comprises comparing the transcriptome/proteome of a condition. The method comprises comparing the transcriptome/proteome of a specialised cell type implicated in a disease or condition with that of second specialised cell type, under two experimental conditions, and contified against the two specialised cell types under experimental conditions. The present invention relates to methods and compositions for detecting an angiogenesis-associated transcript in a cell in a patient. The method involves contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence at least 80% identical to any of the angiogenesis-associated human polynucleotide sequences given in the specification. These angiogenesis-associated polynucleotide sequences comprise genes that exhibit changes in expression levels as a function of time in tissue undergoing angiogenesis. The method and the polynucleotide sequences of the invention are useful for diagnosing and treating angiogenesis and angiogenesis-associated diseases e.g. cancer. The polynucleotide sequences are also useful in the gene therapy of such disorders. The majogenesis-associated proteins encoded by the polynucleotide sequences are useful as a vaccine for therapeutic and prophylactic immunisation. ABX08739-ABX08853 represent angiogenesis-associated proteins encoded by the polynucleotide sequences.

                                                                                                                   \dot{\delta}
                                                                                                                                                                                                                                                                  8
                                                                   The present invention relates to a microarray comprising a matrix of at least one cDNA probe from a set of probes immobilised to a solid surface in a predetermined order, where a row of pixels corresponds to replicates of one distinct probe from the set. The probes are complementary to muchaic acid sequences that are expressed differentially in aggressive as compared to non-aggressive types of clear cell renal carcinoma (CC-RCC) and that hybridise to the probes under high stringency conditions. The microarray is useful for the prognosts of patients with CC-RCC, wherein aggressive and non-aggressive clear cell trenal carcinoma (CC-RCC) wherein differential expression profiles of genes that hybridise with one or more probes immobilised on the microarray. The arrays are useful for gene expression profiling of tumour and normal tissues. The present sequence represents a human cDNA sequence up-regulated in CC-RCC patients
                                                                                                                                                                                                                                                                                                                                                                                                                                       103
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TGAAGAAGTGGGGTCTGGAGACTATGACTCCAACAAGGAACCCTGCTTCCGGGATGAAAA 223

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 523
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               486
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       71
                                                                                                                                                                                                                                                                                                                                           ಥ
                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence encodes human chemokine receptor CXCR4. The specification describes a method for modulating viral infection of a cell. the method comprises modilating a binding increaction between a cell chemokine-receptor and a surface protein of the virus. The proviso is that the cell chemokine-receptor is not CX3CR1 and that the virus is not HIV. The method is useful for treating or preventing respiratory virus infection in vertebrates, more particularly respiratory syncytial virus (RSV) infections, and related diseases, e.g. bronchiolitis, bronchitis,
                                                                                                                                                                                                                                                                                                     Modulating viral infection of a cell, for treating or preventing respiratory virus infections, bronchitis, pneumonia or asthma, by modulating a binding interaction between a cell chemokine-receptor and surface protein of the virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CTGGGCAGTTGATGCCATGCTGACTGGTACTTGGGAAATTTTGTGTGTAAGGCTGTCCA

New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or diseases. autoimmune

Disclosure; Fig 1; 523pp; English.

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acidis. Also described: (1) am assay for the detection of a particular GCC acids. Also described: (1) am assay for the detection of aparticular GCC acids and insolated antibody having high specificity and high affinity or any antigenic peptides for GPCRs are useful in detecting an antibodies. The antigenic peptides for GPCRs are useful in detecting an antibodies. The aptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for dispain of description of specific antibodies are useful for dispaining drugs for treating immune-related disease, growth-related diseases, cell gPCRs and antibodies are useful for dispaining drugs for treating immune-related disease, growth-related diseases, cell attention and antibodies are also useful for dispaining drugs for treating immune-related disease, growth-related diseases, cell disease, or autoimmune disease, e.g. AIDS, Aliahamer's disease, attentions altergies, Crohn's disease, or viral infections of the present constant, dementa, mental recardation, memory loss, epilepsy, asthma, tuberculosis, obseity, natuse, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42863 to ABZ42869 encode GPCR proteins given in ABSP81875 to ABSP82013 to ABZ42869 encode exemplification of the present invention

The invention relates to methods and compositions for inhibiting small cell lung cancer (SCLC) proliferation and metastasis through modulation of the activity or expression of CXC chemokine receptor 4 (CXCR4), and optionally, that of the tyrosine kinase receptor c-Kit. Administration of a CXCR4 inhibitor modulates cellular adhesion and inhibits cellular complete cellular adhesion and inhibits cellular complete cellular adhesion and inhibits cellular sample cellular sample cellular cel
Use of a CXC chemokine receptor 4 (CXCR4) inhibitor, for modulating cellular adhesion or inhibiting proliferation, movement, or morphological change in a small cell lung cancer (SCLC) cell population, or for treating a subject having SCLC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   163

The invention relates to a gene expression profile comprising one or more genes (AB234889-AB25692) and generated from a cell type. The cell type is a coronary artery endothelium, umbilical artery or vein endothelium, cortic endothelium, dermal microvascular endothelium, prometrium microvascular endothelium, prometrium microvascular endothelium, prosetate epithelium, renal cortical epithelium, renal proximal tubule epithelium, myometrium microvascular endothelium, prosetate epithelium, renal cortical epithelium, renal proximal tubule epithelium, myometrium microvascular endothelium, prosetate epithelium, renal epithelium, renal epithelium, renal proximal tubule epithelium, muscle, muscle, menal epithelium, umbilical artery smooth muscle, dermal fibroblast, pulmonary artery artery smooth muscle, dermal fibroblast, cortic smooth muscle, mesangial cells, caronary artery smooth muscle, cortic smooth muscle, uterine smooth muscle, lung fibroblast, osteoblasts or prostate erromal cell. The gene expression profile is used for determining the level of RNA expression for a sample, determining the phenotype of a cell and distinguishing cell types. The gene or a protein expression profile is useful information with respect to tumour type and stage, treatment methods, and prognosis. The gene or protein expression profile may also be used for creating microarrays. The microarray is useful for genetic and physical mapping of genomes, DNA sequencing genetic or medical diagnosis, genotyping of organisms, confirming cell or tissue confirming cell or tissue intitications and in identifying promising antibiotics, antiviral or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       163
